EDUCATION

Narxoz University — Almaty, Kazakhstan

2023 – 2027

BSc in Digital Engineering (English-taught) | Expected: June 2027 | Average: ~82%

Academic Merit Grant (from Year 2): full tuition coverage + monthly stipend for strong academic performance

Coursework: Algorithms & Programming (Python), OOP, Data Structures, Database Systems, Operating Systems, Computer Networks, Software Engineering, Machine Learning, Backend Engineering, Cloud Computing, Computer Architecture

RESEARCH

Impact of Artificial Intelligence on Media and the Music Industry — Narxoz University (2026)

Research project, "Research Methods" course (in English)

- Designed and ran a survey study with 102 respondents; presented findings with charts and statistics
- Blind A/B test: identical audio clip labeled "AI" vs "real" to measure how the label alone biases perception
- Key finding: listeners often could not reliably distinguish AI from human performance (~50/50); compared vs experts/literature
- Defended at university (not formally published)

EXPERIENCE

Top Steel Construction LLP — Intern, Software Development (Automation & Web)

Jun 2026 – Aug 2026

- Windows desktop tool for production accounting: invoice photos/PDF/Word to validated Excel updates without breaking data
- Invoice OCR pipeline (photo to marks/quantities to spreadsheet matching with aliases and business rules)
- Branded web cost calculator + interactive Three.js 3D hangar viewer; prepared for CMS transfer (DataLife Engine)

Miru Systems LLP — Independent Full-stack Developer (unpaid project delivery)

Aug 2026

- End-to-end telemedicine platform (DMU) for city-wide clinic deployment in Almaty with planned CIS expansion
- API + 4 clients (staff, admin, patient Mini App, kiosk), video visits, storage; multi-tenancy, TOTP, access audit
- Delivered complete MVP (booking, consents, e-signed conclusions); handed over codebase, in review before 2027 rollout

PROJECTS

Gunshot Direction Estimation (CS:GO) — Machine Learning | Python, audio processing, neural networks

- Trained a model to estimate gunshot direction from in-game audio; bearing shown on a radial indicator
- Self-collected dataset: per-shot audio paired with ground-truth firing angles (bot practice range); iterative training improved accuracy
- Working prototype with reasonable angular error; migrated from TensorFlow to a faster training library

Narxoz Campus Network Infrastructure (2025) — Cisco Packet Tracer, VLAN, VLSM, STP, DHCP/DNS

- 3-tier campus model for ~1830 devices mapped 1:1 to real departments; designed topology, 7 VLANs, VLSM, inter-VLAN routing, Rapid PVST+, SSH
- Fully working lab (ping, DHCP, DNS, FTP, SSH, NTP verified) | github.com/lolylon/Network-architecture

Miru Remote (Telemedicine) — TypeScript, NestJS, Prisma, PostgreSQL, React, LiveKit, MinIO, Redis, Docker

github.com/lolylon/DMU | Aizhan (AI Registrar): Telegram Mini App + clinic kiosk for booking/triage

Production Status Automation — Python, CustomTkinter, openpyxl, pdfplumber, PyInstaller | github.com/lolylon/Business_Automatization

Top Steel Frame Configurator — HTML, CSS, JavaScript, Three.js | github.com/lolylon/3D-modeling

HACKATHONS

- 3rd place — 72-hour game development hackathon, Satbayev University (2022)
- Narxoz University hackathon (2024) — class-booking app for university sports (PE) sessions

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, Go, PHP, C# (Unity; school projects), C++ (coursework), HTML, CSS, SQL

Mobile: Android app development (Java; coursework/course projects)

Backend: NestJS, Spring Boot, Prisma, PostgreSQL, Redis, Docker, PHP | Frontend: React, Vite, Telegram Mini Apps, Three.js

Game / other: Unity (C#; school-era game projects)

Networking: Cisco Packet Tracer/IOS, VLAN, VLSM, STP, inter-VLAN routing, DHCP, DNS, SSH

AI/ML: model training, audio-based classification, dataset collection, prompt engineering; hands-on with AI tools since 2022

Other: LiveKit, MinIO, desktop automation, Git | Spoken: English (B2), Russian (C2), Kazakh (A2)
